

The image shows a screenshot of a Visual Studio Code editor window. The top menu bar includes File, Edit, Selection, View, Go, Run, and a search icon. The Explorer sidebar on the left shows a project named 'CODSOFT' with a file 'Chatbot.py'. The main editor area displays the code for 'Chatbot.py'. The code is a Python script that uses the 'datetime' and 'random' modules. It contains several conditional statements (if/elif) that respond to user input based on keywords like 'date', 'joke', 'motivate', 'quote', 'attendance', 'exam', 'library', 'calculator', and 'help'. The 'calculator' section uses a try/except block to handle invalid expressions. The 'help' section lists available commands: 'hi / hello' and 'name'. The status bar at the bottom shows 'Spaces: 4', 'UTF-8', 'Python', '3.13.5', 'Python 3.13 (64-bit)', and the system temperature '33°C'.

```
35         datetime.now().strftime("%I:%M:%S %p"))
36
37     elif "date" in user:
38         print(f"{BOT_NAME}: Today's Date:",
39               datetime.now().strftime("%d-%m-%Y"))
40
41     elif "joke" in user:
42         print(f"{BOT_NAME}: {random.choice(jokes)}")
43
44     elif "motivate" in user or "quote" in user:
45         print(f"{BOT_NAME}: {random.choice(quotes)}")
46
47     elif "attendance" in user:
48         print(f"{BOT_NAME}: Attend classes regularly and maintain above 75% attendance.")
49
50     elif "exam" in user:
51         print(f"{BOT_NAME}: Start preparation early and practice previous year questions.")
52
53     elif "library" in user:
54         print(f"{BOT_NAME}: Library timing is generally 9 AM to 5 PM.")
55
56     elif "calculator" in user:
57         try:
58             expression = input("Enter expression (Example: 10+20): ")
59             result = eval(expression)
60             print(f"{BOT_NAME}: Result = {result}")
61         except:
62             print(f"{BOT_NAME}: Invalid Expression!")
63
64     elif user == "help":
65         print("""
66 Available Commands:
67 • hi / hello
68 • name
```

The image shows a Visual Studio Code (VS Code) interface with a terminal window open. The terminal is running a Python script named `Chatbot.py` located in the `codsoft` directory. The script is a chatbot named `KalashAI` that responds to various commands. The terminal output shows the following sequence of events:

```
PS C:\Users\Kalash Tyagi\OneDrive\Desktop\codsoft> & "C:/Users/Kalash Tyagi/AppData/Local/Programs/Python/Python313/python.exe" "c:/Users/Kalash Tyagi/OneDrive/Desktop/codsoft/Chatbot.py"
=====
👋 Welcome to KalashAI
Type 'help' to see commands
Type 'bye' to exit
=====

You: help

Available Commands:
• hi / hello
• name
• time
• date
• joke
• motivate
• attendance
• exam
• library
• calculator
• help
• bye

You: & "C:/Users/Kalash Tyagi/AppData/Local/Programs/Python/Python313/python.exe" "c:/Users/Kalash Tyagi/OneDrive/Desktop/codsoft/Chatbot.py"
KalashAI: Sorry, I don't understand that command.

You: bye
KalashAI: Goodbye! Have a productive day.
PS C:\Users\Kalash Tyagi\OneDrive\Desktop\codsoft>
```

The VS Code interface includes the Explorer sidebar on the left showing the `Chatbot.py` file, and the Terminal panel at the bottom with the command prompt and output. The status bar at the top shows the current file is `codsoft` and the active language is `Python`.
